in the catalonian town of olot, local studio [arnau estudi d'arquitectura](#) has renovated the interior of a small restaurant using a series of angled timber slats. named 'terrasa de la brasera', the scheme is conceived as an indoor pergola, with wooden insertions providing a stark visual contrast with the existing stone building. seeking to take advantage of the region's mild temperatures, large apertures lend the project a sense of openness, while simultaneously ensuring constant ventilation. in cooler weather, the eating area can be fully enclosed to guarantee year round dining.

the scheme is conceived as an indoor pergola
